DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 18-24 and 26, drawn to an antibody specific to MASP-2 polypeptide, and a method for detecting the presence of MASP-2 polypeptide in a sample by using specific binding partner, such as an antibody, classified in classes 424 and 435, subclasses 130.1 and 7.1, respectively.
 - II. Claim 37, drawn to a method for diagnosing a disorder associated with aberrant expression of MASP-2 comprising measuring MASP-2 mRNA expression by using nucleic acid probe specific to MASP-2, classified in class 435, subclass 6.
 - III. Claim 37, drawn to a method for diagnosing a disorder associated with aberrant expression of MASP-2 comprising measuring MASP-2 polypeptide expression by using antibody specific to MASP-2 polypeptide, classified in class 435, subclass 7.1.

Claim 37 link(s) inventions I-III and VIII-XI. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claim 37. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims

Art Unit: 1633

of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also M.E.P.. § 804.01.

2. The inventions are distinct, each from the other because of the following reasons:

Groups II-III are distinct from each other because they are drawn to materially different methods using compositions having different chemical structures, physical properties and biological functions, and requiring separate search: polynucleotides and antibodies. They are methods that differ at least in method steps, reagents and/or dosages used, schedules used, response variables, and criteria for success. They have different classifications and require separate search. They are not obvious variants and deemed patentably distinct.

Group I and groups II-III are distinct from each other because they are drawn to materially distinct methods that differ at least in objectives, method steps, reagents and/or dosages used, schedules used, response variables, and criteria for success. A method for detecting the presence of MASP-2 polypeptide in a sample by using specific binding partner and a method for diagnosing a disorder associated with aberrant expression of MASP-2 are different methods with different objectives, different reagents and/or dosages, different method steps and response variables. Thus, group I and groups II-III are patentably distinct from each other and require separate search.

Art Unit: 1633

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
